

Modules over orders, conjugacy classes of integral matrices and abelian varieties over finite fields

Stefano Marseglia

University of French Polynesia

July 18 2024 - ANTS XVI - MIT

Thank you

Thank you

Back in Bristol... during the RUMP session

Welcome to your Linear Algebra 1 exam!

Don't forget to motivate your answers.
The use of the (Magma) calculator is allowed.

- Let R be a commutative ring with unity.
- $A, B \in \text{Mat}_{n \times n}(R)$ are **R -conjugate** ($A \sim_R B$) if $AP = PB$ for some $P \in \text{GL}_n(R)$.
- The **minimal** polynomial $m(x)$ of $A \in \text{Mat}_{n \times n}(R)$ is the polynomial of smallest degree such that $m(A) = O$ (the zero $n \times n$ matrix).
- The **characteristic** polynomial of $A \in \text{Mat}_{n \times n}(R)$ is $\det(xI_n - A)$.

- Let R be a commutative ring with unity.
- $A, B \in \text{Mat}_{n \times n}(R)$ are R -conjugate ($A \sim_R B$) if $AP = PB$ for some $P \in \text{GL}_n(R)$.
- The **minimal** polynomial $m(x)$ of $A \in \text{Mat}_{n \times n}(R)$ is the polynomial of smallest degree such that $m(A) = O$ (the zero $n \times n$ matrix).
- The **characteristic** polynomial of $A \in \text{Mat}_{n \times n}(R)$ is $\det(xI_n - A)$.

Question 1: Are the following two matrices \mathbb{Q} -conjugate? Are they \mathbb{Z} -conjugate?

$$A = \begin{pmatrix} 0 & -1 \\ 5 & 0 \end{pmatrix}, \quad B = \begin{pmatrix} -1 & 2 \\ -3 & 1 \end{pmatrix}$$

- Let R be a commutative ring with unity.
- $A, B \in \text{Mat}_{n \times n}(R)$ are **R -conjugate** ($A \sim_R B$) if $AP = PB$ for some $P \in \text{GL}_n(R)$.
- The **minimal** polynomial $m(x)$ of $A \in \text{Mat}_{n \times n}(R)$ is the polynomial of smallest degree such that $m(A) = O$ (the zero $n \times n$ matrix).
- The **characteristic** polynomial of $A \in \text{Mat}_{n \times n}(R)$ is $\det(xI_n - A)$.

Question 1: Are the following two matrices \mathbb{Q} -conjugate? Are they \mathbb{Z} -conjugate?

$$A = \begin{pmatrix} 0 & -1 \\ 5 & 0 \end{pmatrix}, \quad B = \begin{pmatrix} -1 & 2 \\ -3 & 1 \end{pmatrix}$$

Answer(s):

- Let R be a commutative ring with unity.
- $A, B \in \text{Mat}_{n \times n}(R)$ are R -conjugate ($A \sim_R B$) if $AP = PB$ for some $P \in \text{GL}_n(R)$.
- The **minimal** polynomial $m(x)$ of $A \in \text{Mat}_{n \times n}(R)$ is the polynomial of smallest degree such that $m(A) = O$ (the zero $n \times n$ matrix).
- The **characteristic** polynomial of $A \in \text{Mat}_{n \times n}(R)$ is $\det(xI_n - A)$.

Question 1: Are the following two matrices \mathbb{Q} -conjugate? Are they \mathbb{Z} -conjugate?

$$A = \begin{pmatrix} 0 & -1 \\ 5 & 0 \end{pmatrix}, \quad B = \begin{pmatrix} -1 & 2 \\ -3 & 1 \end{pmatrix}$$

Answer(s):

Over \mathbb{Q} : yes! Same characteristic polynomial $x^2 + 5$, which is irreducible.

- Let R be a commutative ring with unity.
- $A, B \in \text{Mat}_{n \times n}(R)$ are R -conjugate ($A \sim_R B$) if $AP = PB$ for some $P \in \text{GL}_n(R)$.
- The **minimal** polynomial $m(x)$ of $A \in \text{Mat}_{n \times n}(R)$ is the polynomial of smallest degree such that $m(A) = O$ (the zero $n \times n$ matrix).
- The **characteristic** polynomial of $A \in \text{Mat}_{n \times n}(R)$ is $\det(xI_n - A)$.

Question 1: Are the following two matrices \mathbb{Q} -conjugate? Are they \mathbb{Z} -conjugate?

$$A = \begin{pmatrix} 0 & -1 \\ 5 & 0 \end{pmatrix}, \quad B = \begin{pmatrix} -1 & 2 \\ -3 & 1 \end{pmatrix}$$

Answer(s):

Over \mathbb{Q} : yes! Same characteristic polynomial $x^2 + 5$, which is irreducible.

But...

- Let R be a commutative ring with unity.
- $A, B \in \text{Mat}_{n \times n}(R)$ are R -conjugate ($A \sim_R B$) if $AP = PB$ for some $P \in \text{GL}_n(R)$.
- The **minimal** polynomial $m(x)$ of $A \in \text{Mat}_{n \times n}(R)$ is the polynomial of smallest degree such that $m(A) = O$ (the zero $n \times n$ matrix).
- The **characteristic** polynomial of $A \in \text{Mat}_{n \times n}(R)$ is $\det(xI_n - A)$.

Question 1: Are the following two matrices \mathbb{Q} -conjugate? Are they \mathbb{Z} -conjugate?

$$A = \begin{pmatrix} 0 & -1 \\ 5 & 0 \end{pmatrix}, \quad B = \begin{pmatrix} -1 & 2 \\ -3 & 1 \end{pmatrix}$$

Answer(s):

Over \mathbb{Q} : yes! Same characteristic polynomial $x^2 + 5$, which is irreducible.

But...

Over \mathbb{Z} : no! Why?

Fix monic polynomials $m = m_1 \cdots m_n$ and $h = m_1^{s_1} \cdots m_n^{s_n}$ in $\mathbb{Z}[x]$ with

- each m_i irreducible and
- $m_i \neq m_j$ if $i \neq j$. (i.e. m is squarefree)

Fix monic polynomials $m = m_1 \cdots m_n$ and $h = m_1^{s_1} \cdots m_n^{s_n}$ in $\mathbb{Z}[x]$ with

- each m_i irreducible and
- $m_i \neq m_j$ if $i \neq j$. (i.e. m is squarefree)

Question 2 Can we describe the representatives of the \mathbb{Z} -conjugacy classes of matrices with:

- minimal polynomial m , and
- characteristic polynomial h ?

Fix monic polynomials $m = m_1 \cdots m_n$ and $h = m_1^{s_1} \cdots m_n^{s_n}$ in $\mathbb{Z}[x]$ with

- each m_i irreducible and
- $m_i \neq m_j$ if $i \neq j$. (i.e. m is squarefree)

Question 2 Can we describe the representatives of the \mathbb{Z} -conjugacy classes of matrices with:

- minimal polynomial m , and
- characteristic polynomial h ?

Answer:

Theorem ((generalized) Latimer-MacDuffee)

The order $\mathbb{Z}[\pi] = \frac{\mathbb{Z}[x]}{(m)}$ acts on $V = \left(\frac{\mathbb{Q}[x]}{m_1}\right)^{s_1} \times \cdots \times \left(\frac{\mathbb{Q}[x]}{m_n}\right)^{s_n}$.

We have a bijection

$$\{\mathbb{Z}[\pi]\text{-lattices in } V\} / \simeq_{\mathbb{Z}[\pi]}$$

Fix monic polynomials $m = m_1 \cdots m_n$ and $h = m_1^{s_1} \cdots m_n^{s_n}$ in $\mathbb{Z}[x]$ with

- each m_i irreducible and
- $m_i \neq m_j$ if $i \neq j$. (i.e. m is squarefree)

Question 2 Can we describe the representatives of the \mathbb{Z} -conjugacy classes of matrices with:

- minimal polynomial m , and
- characteristic polynomial h ?

Answer:

Theorem ((generalized) Latimer-MacDuffee)

The order $\mathbb{Z}[\pi] = \frac{\mathbb{Z}[x]}{(m)}$ acts on $V = \left(\frac{\mathbb{Q}[x]}{m_1}\right)^{s_1} \times \cdots \times \left(\frac{\mathbb{Q}[x]}{m_n}\right)^{s_n}$.

We have a bijection

$$\begin{array}{c} \{\mathbb{Z}[\pi]\text{-lattices in } V\} / \simeq_{\mathbb{Z}[\pi]} \\ \updownarrow \\ \{\text{matrices with min. poly. } m \text{ and char. poly. } h\} / \sim_{\mathbb{Z}} \end{array}$$

Example

If $h = x^2 + 5$ then $K = V = \mathbb{Q}(\sqrt{-5})$.

The conjugacy classes of matrices with char. poly h are in bijection with $\text{Pic}(\mathcal{O}_K)$, which has 2 elements.

Example

If $h = x^2 + 5$ then $K = V = \mathbb{Q}(\sqrt{-5})$.

The conjugacy classes of matrices with char. poly h are in bijection with $\text{Pic}(\mathcal{O}_K)$, which has 2 elements.

Proof (idea):

Example

If $h = x^2 + 5$ then $K = V = \mathbb{Q}(\sqrt{-5})$.

The conjugacy classes of matrices with char. poly h are in bijection with $\text{Pic}(\mathcal{O}_K)$, which has 2 elements.

Proof (idea):

- Let M be a $\mathbb{Z}[\pi]$ -lattice in V and fix a \mathbb{Z} -basis \mathcal{B} .

Example

If $h = x^2 + 5$ then $K = V = \mathbb{Q}(\sqrt{-5})$.

The conjugacy classes of matrices with char. poly h are in bijection with $\text{Pic}(\mathcal{O}_K)$, which has 2 elements.

Proof (idea):

- Let M be a $\mathbb{Z}[\pi]$ -lattice in V and fix a \mathbb{Z} -basis \mathcal{B} .
- Let A be the matrix representing the multiplication-by- π wrt \mathcal{B} .

Example

If $h = x^2 + 5$ then $K = V = \mathbb{Q}(\sqrt{-5})$.

The conjugacy classes of matrices with char. poly h are in bijection with $\text{Pic}(\mathcal{O}_K)$, which has 2 elements.

Proof (idea):

- Let M be a $\mathbb{Z}[\pi]$ -lattice in V and fix a \mathbb{Z} -basis \mathcal{B} .
- Let A be the matrix representing the multiplication-by- π wrt \mathcal{B} .
- The induced map is well-defined and injective.

Example

If $h = x^2 + 5$ then $K = V = \mathbb{Q}(\sqrt{-5})$.

The conjugacy classes of matrices with char. poly h are in bijection with $\text{Pic}(\mathcal{O}_K)$, which has 2 elements.

Proof (idea):

- Let M be a $\mathbb{Z}[\pi]$ -lattice in V and fix a \mathbb{Z} -basis \mathcal{B} .
- Let A be the matrix representing the multiplication-by- π wrt \mathcal{B} .
- The induced map is well-defined and injective.
- For the 'surjectivity' part: take the \mathbb{Z} -span of 'algebraic eigenvectors'.

What about abelian varieties?

What about abelian varieties?

Question 3 Fix a Weil polynomial $h = m_1^{s_1} \cdots m_n^{s_n}$ which is ordinary over \mathbb{F}_q , or over \mathbb{F}_p and without real roots.

What about abelian varieties?

Question 3 Fix a Weil polynomial $h = m_1^{s_1} \cdots m_n^{s_n}$ which is ordinary over \mathbb{F}_q , or over \mathbb{F}_p and without real roots. How do you compute abelian varieties over \mathbb{F}_q with char. poly of Frobenius h ? (up to \mathbb{F}_q -isomorphism)?

What about abelian varieties?

Question 3 Fix a Weil polynomial $h = m_1^{s_1} \cdots m_n^{s_n}$ which is ordinary over \mathbb{F}_q , or over \mathbb{F}_p and without real roots. How do you compute abelian varieties over \mathbb{F}_q with char. poly of Frobenius h ? (up to \mathbb{F}_q -isomorphism)?

Answer: Do the same thing with $\mathbb{Z}[\pi, q/\pi]$ instead of $\mathbb{Z}[\pi]$:

What about abelian varieties?

Question 3 Fix a Weil polynomial $h = m_1^{s_1} \cdots m_n^{s_n}$ which is ordinary over \mathbb{F}_q , or over \mathbb{F}_p and without real roots. How do you compute abelian varieties over \mathbb{F}_q with char. poly of Frobenius h ? (up to \mathbb{F}_q -isomorphism)?

Answer: Do the same thing with $\mathbb{Z}[\pi, q/\pi]$ instead of $\mathbb{Z}[\pi]$:

Theorem (Deligne/Centelghe-Stix)

$$\{ \text{abelian varieties with char. poly. } h \} / \simeq_{\mathbb{F}_q}$$

What about abelian varieties?

Question 3 Fix a Weil polynomial $h = m_1^{s_1} \cdots m_n^{s_n}$ which is ordinary over \mathbb{F}_q , or over \mathbb{F}_p and without real roots. How do you compute abelian varieties over \mathbb{F}_q with char. poly of Frobenius h ? (up to \mathbb{F}_q -isomorphism)?

Theorem (Deligne/Centelghe-Stix)

$$\begin{array}{c} \{ \text{abelian varieties with char. poly. } h \} / \simeq_{\mathbb{F}_q} \\ \updownarrow \\ \left\{ \mathbb{Z}[\pi, q/\pi]\text{-lattices in } V = \left(\frac{\mathbb{Q}[x]}{m_1} \right)^{s_1} \times \cdots \times \left(\frac{\mathbb{Q}[x]}{m_n} \right)^{s_n} \right\} / \simeq_{\mathbb{Z}[\pi, q/\pi]} \end{array}$$

How do we make these two theorems effective?

How do we make these two theorems effective?

- 1 Find a 'finite box' that contains representatives of all isomorphism classes.
- 2 (Use other people's work to) pick out a minimal set of representatives.

Set-up:

- K_1, \dots, K_n number fields, with ring of integers $\mathcal{O}_i \subset K_i$.
- $K = K_1 \times \dots \times K_n$.
- $\mathcal{O} = \mathcal{O}_1 \times \dots \times \mathcal{O}_n$, the maximal order of K .

Set-up:

- K_1, \dots, K_n number fields, with ring of integers $\mathcal{O}_i \subset K_i$.
- $K = K_1 \times \dots \times K_n$.
- $\mathcal{O} = \mathcal{O}_1 \times \dots \times \mathcal{O}_n$, the maximal order of K .
- s_1, \dots, s_n integers > 0 , $V = K_1^{s_1} \times \dots \times K_n^{s_n}$, with the component-wise diagonal action of K .
- for an order R in K , set $\mathcal{L}(R, V) = \{R\text{-lattice in } V\}$.
- By the Jordan-Zassenhaus Theorem, $\mathcal{L}(R, V)/\simeq_R$ is finite.

Set-up:

- K_1, \dots, K_n number fields, with ring of integers $\mathcal{O}_i \subset K_i$.
- $K = K_1 \times \dots \times K_n$.
- $\mathcal{O} = \mathcal{O}_1 \times \dots \times \mathcal{O}_n$, the maximal order of K .
- s_1, \dots, s_n integers > 0 , $V = K_1^{s_1} \times \dots \times K_n^{s_n}$, with the component-wise diagonal action of K .
- for an order R in K , set $\mathcal{L}(R, V) = \{R\text{-lattice in } V\}$.
- By the Jordan-Zassenhaus Theorem, $\mathcal{L}(R, V)/\simeq_R$ is finite.

Proposition (Steinitz)

Let M be in $\mathcal{L}(\mathcal{O}, V)$.

Set-up:

- K_1, \dots, K_n number fields, with ring of integers $\mathcal{O}_i \subset K_i$.
- $K = K_1 \times \dots \times K_n$.
- $\mathcal{O} = \mathcal{O}_1 \times \dots \times \mathcal{O}_n$, the maximal order of K .
- s_1, \dots, s_n integers > 0 , $V = K_1^{s_1} \times \dots \times K_n^{s_n}$, with the component-wise diagonal action of K .
- for an order R in K , set $\mathcal{L}(R, V) = \{R\text{-lattice in } V\}$.
- By the Jordan-Zassenhaus Theorem, $\mathcal{L}(R, V)/\simeq_R$ is finite.

Proposition (Steinitz)

Let M be in $\mathcal{L}(\mathcal{O}, V)$. Then there are fractional \mathcal{O}_i -ideals I_i and an \mathcal{O} -linear isomorphism

$$M \simeq \bigoplus_{i=1}^n \left(\mathcal{O}_i^{\oplus(s_i-1)} \oplus I_i \right).$$

Set-up:

- K_1, \dots, K_n number fields, with ring of integers $\mathcal{O}_i \subset K_i$.
- $K = K_1 \times \dots \times K_n$.
- $\mathcal{O} = \mathcal{O}_1 \times \dots \times \mathcal{O}_n$, the maximal order of K .
- s_1, \dots, s_n integers > 0 , $V = K_1^{s_1} \times \dots \times K_n^{s_n}$, with the component-wise diagonal action of K .
- for an order R in K , set $\mathcal{L}(R, V) = \{R\text{-lattice in } V\}$.
- By the Jordan-Zassenhaus Theorem, $\mathcal{L}(R, V)/\simeq_R$ is finite.

Proposition (Steinitz)

Let M be in $\mathcal{L}(\mathcal{O}, V)$. Then there are fractional \mathcal{O}_i -ideals I_i and an \mathcal{O} -linear isomorphism

$$M \simeq \bigoplus_{i=1}^n \left(\mathcal{O}_i^{\oplus(s_i-1)} \oplus I_i \right).$$

The isomorphism class of M is uniquely determined by the isomorphism class of the fractional \mathcal{O} -ideal $I = I_1 \oplus \dots \oplus I_n$.

- Let $\mathfrak{f} = (R : \mathcal{O}) = \{x \in K : x\mathcal{O} \subseteq R\}$ be the conductor of R in \mathcal{O} .

- Let $\mathfrak{f} = (R : \mathcal{O}) = \{x \in K : x\mathcal{O} \subseteq R\}$ be the conductor of R in \mathcal{O} .
- Write $\mathfrak{f} = \bigoplus_{i=1}^n \mathfrak{f}_i$, \mathfrak{f}_i a fractional \mathcal{O}_i -ideal in K_i .

- Let $\mathfrak{f} = (R : \mathcal{O}) = \{x \in K : x\mathcal{O} \subseteq R\}$ be the conductor of R in \mathcal{O} .
- Write $\mathfrak{f} = \bigoplus_{i=1}^n \mathfrak{f}_i$, \mathfrak{f}_i a fractional \mathcal{O}_i -ideal in K_i .

Theorem

Let M be in $\mathcal{L}(R, V)$.

- Let $\mathfrak{f} = (R : \mathcal{O}) = \{x \in K : x\mathcal{O} \subseteq R\}$ be the conductor of R in \mathcal{O} .
- Write $\mathfrak{f} = \bigoplus_{i=1}^n \mathfrak{f}_i$, \mathfrak{f}_i a fractional \mathcal{O}_i -ideal in K_i .

Theorem

Let M be in $\mathcal{L}(R, V)$. Then there exist M' in $\mathcal{L}(R, V)$, and fractional \mathcal{O}_i -ideals I_i such that

- Let $\mathfrak{f} = (R : \mathcal{O}) = \{x \in K : x\mathcal{O} \subseteq R\}$ be the conductor of R in \mathcal{O} .
- Write $\mathfrak{f} = \bigoplus_{i=1}^n \mathfrak{f}_i$, \mathfrak{f}_i a fractional \mathcal{O}_i -ideal in K_i .

Theorem

Let M be in $\mathcal{L}(R, V)$. Then there exist M' in $\mathcal{L}(R, V)$, and fractional \mathcal{O}_i -ideals I_i such that

- $M' \simeq M$ as an R -module.

- Let $\mathfrak{f} = (R : \mathcal{O}) = \{x \in K : x\mathcal{O} \subseteq R\}$ be the conductor of R in \mathcal{O} .
- Write $\mathfrak{f} = \bigoplus_{i=1}^n \mathfrak{f}_i$, \mathfrak{f}_i a fractional \mathcal{O}_i -ideal in K_i .

Theorem

Let M be in $\mathcal{L}(R, V)$. Then there exist M' in $\mathcal{L}(R, V)$, and fractional \mathcal{O}_i -ideals I_i such that

- $M' \simeq M$ as an R -module.
- $M'\mathcal{O} = \bigoplus_{i=1}^n \left(\mathcal{O}_i^{\oplus(s_i-1)} \oplus I_i \right)$.

- Let $\mathfrak{f} = (R : \mathcal{O}) = \{x \in K : x\mathcal{O} \subseteq R\}$ be the conductor of R in \mathcal{O} .
- Write $\mathfrak{f} = \bigoplus_{i=1}^n \mathfrak{f}_i$, \mathfrak{f}_i a fractional \mathcal{O}_i -ideal in K_i .

Theorem

Let M be in $\mathcal{L}(R, V)$. Then there exist M' in $\mathcal{L}(R, V)$, and fractional \mathcal{O}_i -ideals I_i such that

- $M' \simeq M$ as an R -module.
- $M'\mathcal{O} = \bigoplus_{i=1}^n \left(\mathcal{O}_i^{\oplus(s_i-1)} \oplus I_i \right)$.
- $\bigoplus_{i=1}^n \left(\mathfrak{f}_i^{\oplus(s_i-1)} \oplus \mathfrak{f}_i I_i \right) \subseteq M' \subseteq \bigoplus_{i=1}^n \left(\mathcal{O}_i^{\oplus(s_i-1)} \oplus I_i \right)$.

- Let $\mathfrak{f} = (R : \mathcal{O}) = \{x \in K : x\mathcal{O} \subseteq R\}$ be the conductor of R in \mathcal{O} .
- Write $\mathfrak{f} = \bigoplus_{i=1}^n \mathfrak{f}_i$, \mathfrak{f}_i a fractional \mathcal{O}_i -ideal in K_i .

Theorem

Let M be in $\mathcal{L}(R, V)$. Then there exist M' in $\mathcal{L}(R, V)$, and fractional \mathcal{O}_i -ideals I_i such that

- $M' \simeq M$ as an R -module.
- $M'\mathcal{O} = \bigoplus_{i=1}^n \left(\mathcal{O}_i^{\oplus(s_i-1)} \oplus I_i \right)$.
- $\bigoplus_{i=1}^n \left(\mathfrak{f}_i^{\oplus(s_i-1)} \oplus \mathfrak{f}_i I_i \right) \subseteq M' \subseteq \bigoplus_{i=1}^n \left(\mathcal{O}_i^{\oplus(s_i-1)} \oplus I_i \right)$.

Proof:

By Steinintz: there are I_i 's and an \mathcal{O} -isomorphism such that

$$\psi : M\mathcal{O} \rightarrow \bigoplus_{i=1}^n \left(\mathcal{O}_i^{\oplus(s_i-1)} \oplus I_i \right).$$

Set $M' = \psi(M)$. QED

- The previous theorem tells us that $M \in \mathcal{L}(R, V)$ admits an isomorphic copy M' among the lifts to V of the finitely many sub- R -modules of

$$\mathcal{Q}(I) = \frac{\mathcal{O}_1^{\oplus(s_1-1)} \oplus I_1 \oplus \dots \oplus \mathcal{O}_n^{\oplus(s_n-1)} \oplus I_n}{\mathfrak{f}_1^{\oplus(s_1-1)} \oplus \mathfrak{f}_1 I_1 \oplus \dots \oplus \mathfrak{f}_n^{\oplus(s_n-1)} \oplus \mathfrak{f}_n I_n}.$$

- The previous theorem tells us that $M \in \mathcal{L}(R, V)$ admits an isomorphic copy M' among the lifts to V of the finitely many sub- R -modules of

$$\mathcal{Q}(I) = \frac{\mathcal{O}_1^{\oplus(s_1-1)} \oplus I_1 \oplus \dots \oplus \mathcal{O}_n^{\oplus(s_n-1)} \oplus I_n}{\mathfrak{f}_1^{\oplus(s_1-1)} \oplus \mathfrak{f}_1 I_1 \oplus \dots \oplus \mathfrak{f}_n^{\oplus(s_n-1)} \oplus \mathfrak{f}_n I_n}.$$

- For each fractional \mathcal{O} -ideal $I = \oplus_i I_i$, we have an \mathcal{O} -isomorphism $\Psi_I : \mathcal{Q}(I) \rightarrow \mathcal{Q}(\mathcal{O})$ inducing a bijection between the sub- R -modules.

- The previous theorem tells us that $M \in \mathcal{L}(R, V)$ admits an isomorphic copy M' among the lifts to V of the finitely many sub- R -modules of

$$\mathcal{Q}(I) = \frac{\mathcal{O}_1^{\oplus(s_1-1)} \oplus I_1 \oplus \dots \oplus \mathcal{O}_n^{\oplus(s_n-1)} \oplus I_n}{\mathfrak{f}_1^{\oplus(s_1-1)} \oplus \mathfrak{f}_1 I_1 \oplus \dots \oplus \mathfrak{f}_n^{\oplus(s_n-1)} \oplus \mathfrak{f}_n I_n}.$$

- For each fractional \mathcal{O} -ideal $I = \oplus_i I_i$, we have an \mathcal{O} -isomorphism $\Psi_I : \mathcal{Q}(I) \rightarrow \mathcal{Q}(\mathcal{O})$ inducing a bijection between the sub- R -modules.
- **Important:** there are algorithms `IsIsomorphic` that answer the following question:

- The previous theorem tells us that $M \in \mathcal{L}(R, V)$ admits an isomorphic copy M' among the lifts to V of the finitely many sub- R -modules of

$$\mathcal{Q}(I) = \frac{\mathcal{O}_1^{\oplus(s_1-1)} \oplus I_1 \oplus \dots \oplus \mathcal{O}_n^{\oplus(s_n-1)} \oplus I_n}{\mathfrak{f}_1^{\oplus(s_1-1)} \oplus \mathfrak{f}_1 I_1 \oplus \dots \oplus \mathfrak{f}_n^{\oplus(s_n-1)} \oplus \mathfrak{f}_n I_n}.$$

- For each fractional \mathcal{O} -ideal $I = \oplus_i I_i$, we have an \mathcal{O} -isomorphism $\Psi_I : \mathcal{Q}(I) \rightarrow \mathcal{Q}(\mathcal{O})$ inducing a bijection between the sub- R -modules.
- **Important:** there are algorithms `IsIsomorphic` that answer the following question: given $M, M' \in \mathcal{L}(R, V)$, is there an R -linear isomorphism $M \simeq M'$?

- 6 Return $\sqcup_I \mathcal{L}_I$.

Example

Let

$$m_1 = x^2 - x + 3, \quad m_2 = x^2 + x + 3,$$

$$m = m_1 m_2, \quad h = m_1^2 m_2.$$

Example

Let

$$\begin{aligned}m_1 &= x^2 - x + 3, & m_2 &= x^2 + x + 3, \\m &= m_1 m_2, & h &= m_1^2 m_2.\end{aligned}$$

Set: $K_i = \mathbb{Q}[x]/m_i$, $K = K_1 \times K_2 = \mathbb{Q}[\pi]$, $V = K_1^2 \times K_2$, $E = \mathbb{Z}[\pi]$, $R = \mathbb{Z}[\pi, 3/\pi]$.

Example

Let

$$\begin{aligned}m_1 &= x^2 - x + 3, & m_2 &= x^2 + x + 3, \\m &= m_1 m_2, & h &= m_1^2 m_2.\end{aligned}$$

Set: $K_i = \mathbb{Q}[x]/m_i$, $K = K_1 \times K_2 = \mathbb{Q}[\pi]$, $V = K_1^2 \times K_2$, $E = \mathbb{Z}[\pi]$, $R = \mathbb{Z}[\pi, 3/\pi]$. Then:

- the \mathbb{Z} -conj. classes of 6×6 -matrices with min. poly m and char. poly h are in bijection with $\mathcal{L}(E, V)/\simeq_E$: there is 4 of them.

Example

Let

$$\begin{aligned}m_1 &= x^2 - x + 3, & m_2 &= x^2 + x + 3, \\m &= m_1 m_2, & h &= m_1^2 m_2.\end{aligned}$$

Set: $K_i = \mathbb{Q}[x]/m_i$, $K = K_1 \times K_2 = \mathbb{Q}[\pi]$, $V = K_1^2 \times K_2$, $E = \mathbb{Z}[\pi]$, $R = \mathbb{Z}[\pi, 3/\pi]$. Then:

- the \mathbb{Z} -conj. classes of 6×6 -matrices with min. poly m and char. poly h are in bijection with $\mathcal{L}(E, V)/\simeq_E$: there is 4 of them.
- the \mathbb{F}_3 -isomorphism classes of abelian varieties in the \mathbb{F}_3 -isogeny class determined by the 3-Weil polynomial h are in bijection with $\mathcal{L}(R, V)/\simeq_R$: there is 2 of them.

Example

Let

$$\begin{aligned}m_1 &= x^2 - x + 3, & m_2 &= x^2 + x + 3, \\m &= m_1 m_2, & h &= m_1^2 m_2.\end{aligned}$$

Set: $K_i = \mathbb{Q}[x]/m_i$, $K = K_1 \times K_2 = \mathbb{Q}[\pi]$, $V = K_1^2 \times K_2$, $E = \mathbb{Z}[\pi]$, $R = \mathbb{Z}[\pi, 3/\pi]$. Then:

- the \mathbb{Z} -conj. classes of 6×6 -matrices with min. poly m and char. poly h are in bijection with $\mathcal{L}(E, V)/\simeq_E$: there is 4 of them.
- the \mathbb{F}_3 -isomorphism classes of abelian varieties in the \mathbb{F}_3 -isogeny class determined by the 3-Weil polynomial h are in bijection with $\mathcal{L}(R, V)/\simeq_R$: there is 2 of them.

Thank you!
